

BioCat offers a quick and secure resolution to shoreline and marina pollution incidents. When used on boats, ships or on off shore drill rigs and platforms, **BioCat** will significantly reduce accidental pollution incidents !

A super absorbent for diesel, paints, oil fuels, lubricants and hydraulic fluids.

Able to economically bioremediate large volumes of collected hydrocarbon pollution, such as oil or 'boomed' oil.

Able to arrest the progress of the contaminant into the environment.

Capable of reducing or eliminating the effects of spills on ships, off shore structures, marinas and shoreline incidents.

Available in emergency spill kits, weatherproof tubs and in bulk for large scale spills.

Quick, economical and effective solution for arresting hydrocarbon spills.
 Safe and easy to use having no effects on water, soil and plants.
 Can be used on both hard and soft surfaces such as concrete and soil.
 Absorbs up to 10 times its own weight.
 Is a light weight substance, reducing transport costs.
 Can be recycled and has multiple disposal options.

BioCat is a remarkable hydrocarbon absorbent, which offers significant technical and commercial benefits to spill responders, hydrocarbon contaminated land clean up, oil sludge and hydrocarbon contaminated water treatment.

BioCat absorbs a wide range of hydrocarbon based materials including oils, petrol, derv, hydraulic oils, oil based paints, lubricants, solvents, epoxies and urethanes. It is also highly effective on silicone oils and polymers.

Pick up your hydrocarbon spills as easy as

1...

Completely cover the spill with BioCat. Using brush head, lightly press BioCat into the spill with a stippling action.

2...

Sweep back and forth with a stiff brush until the spill is fully absorbed and the surface is clean of any residue.

3..

Pick up used BioCat with a dust-pan. Process through a BioCat mini or maxi recycling centre. Dispose of all used product in accordance with local regulations.

HEALTH & SAFETY

Slips, Trips and Falls - One of the greatest causes of downtime, absenteeism and claims.

BioCat can significantly reduce or eliminate these instances, as the spill can be dealt with immediately leaving no slippery residue to present further accident risk.

Fire Suppressant

Many conventional absorbents present their own health & safety risks including increased fire risk. BioCat significantly reduces VOC's and is classified as non - flammable.

Occupational Expoaure Limits

Many absorbents such as acid lint have low OEL's and present risks due to particulate and fume inhalation.

BioCat's OEL is safer then talc.

Recycling Centre

The BioCat Recycling Centre was developed to provide an easily portable method of sieving and reusing unabsorbed BioCat cleanly and efficiently.

UNIQUE DESIGN

Visible panel enables the user to see the condition of the BioCat

REDUCES COST

Recycles unused BioCat to achieve maximum usage, which in turn provides significant cost savings

ALL IN ONE STATION

Provides all the tools necessary for the spill

DURABLE DESIGN

Allows spills to be dealt with quickly and simply

PORTABLE

Can be taken to the spill site for a quick spill response

TECHNICAL

Overall Volume: 120 Litres

External Dimensions: 535x460x940mm

Weight: 9.6 kg

Construction: HDPE

Capacity: Up to 90 Litres of used BioCat
